**Supplemental file 2: Figure 2**. Circulation concept of the data pipeline in the WildLIVE! project

Supplemental file 2: Figure 2: Circulation concept of data pipeline in the WildLIVE! project. WildLIVE! is structured using a circular workflow in which data is collected using autonomous devices, uploaded onto a web based platform and processed by citizen scientists and experts. This results in the creation of a valuable dataset used for scientific analysis and to train an artificial intelligence model. Information is then feedback to local communities and relevant stakeholders.
